- Performed quality checks, compliance inspections, and testing on transformer parts to meet client requirements.

PROJECTS

Retail Analytics Dashboard (Power BI)

Built a Power BI dashboard on e-commerce data with executive KPIs, a delivery-performance view linking late deliveries to lower review scores, and a category/growth analysis (Pareto, MoM growth).

E-Commerce SQL Analytics

Answered business questions through SQL queries with a business-insight layer on each result.

Smart Inventory Forecaster

Demand forecasting and inventory optimization using Python (forecasting models + reorder points / safety stock), turning forecasts into order-quantity and stock-out-cost recommendations.

AI Business Research Assistant (MBA project)

Built a business research tool that improves communication between language models and the user through prompt engineering, structural enhancements thereby improving business report quality of the output.
