PROFILE

Data analyst with an MBA and a background in SQL, Python, and process automation (RPA). Well versed in building dashboards, extracting and transforming data, and using it to generate business recommendations, with AI and automation approaches to reduce manual effort. Hands-on retail experience grounds the analysis in real operations.

WORK EXPERIENCE

Sales Associate / Customer Service London Drugs, BC (Canada)	Oct 2024 - Present
• Process customer transactions and processing the payments, returns, article exchanges. • Assisting the customers on the floor, managing self checkout area of the store. • Stocking of products on shelves, with adequate organization, giving me hands on experience to inventory , pricing and merchandise flow that grounds my interest in retail analytics.	
RPA Developer & Data Analyst rSutra Analytics and Consulting Pvt Ltd (India)	Mar 2022 - Sept 2023
• Extracted, cleaned, and transformed data from multiple business systems to support analysis, reporting, and automation for MNC clients. • Built automated reporting and workflow solutions (RPA + machine learning) that reduced manual effort — including an email classification model reaching 95%+ accuracy. • Produced monthly sales reporting and highlight summaries using Python and a client's internal BI tool, giving stakeholders clear visibility into performance trends. • Ran process analysis and feasibility studies, translating business questions into data requirements and presenting findings to stakeholders and senior leadership.	
Automation Engineer Pearl Electricals (India)	Apr 2019 - Feb 2023
• Installed and commissioned industrial automation systems (PLC/VFD), working with technicians and project managers to deliver on schedule.	
Electrical Testing Engineer Chintamani Laminations (India)	Aug 2016 - Mar 2019
• Performed quality checks, compliance inspections, and testing on transformer parts to meet client requirements.	

PROJECTS

Retail Analytics Dashboard (Power BI)
• Built a 3-page Power BI dashboard on e-commerce data with executive KPIs, a delivery-performance view linking late deliveries to lower review scores, and a category/growth analysis (Pareto, MoM growth).
E-Commerce SQL Analytics
• Answered business questions in SQL (revenue by category with MoM growth, cohort retention, delivery time by state) using CTEs and window functions, with a business-insight layer on each result.
Smart Inventory Forecaster
• Demand forecasting and inventory optimization in Python (forecasting models + reorder points / safety stock), turning forecasts into order-quantity and stockout-cost recommendations.
AI Business Research Assistant (MBA project)
• Built a business research tool that improved AI-generated outputs through structured inputs, and evaluated output quality and consistency for decision-support tasks.
